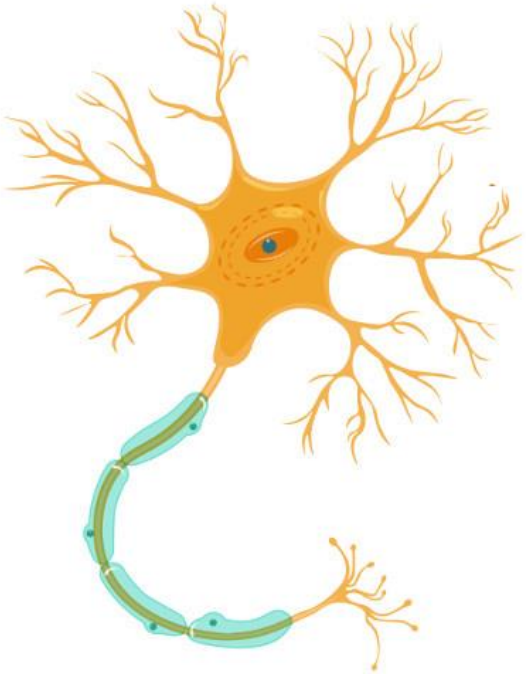
O que são Redes Neurais?

Redes Neurais



Qual a estrutura de uma RNA?

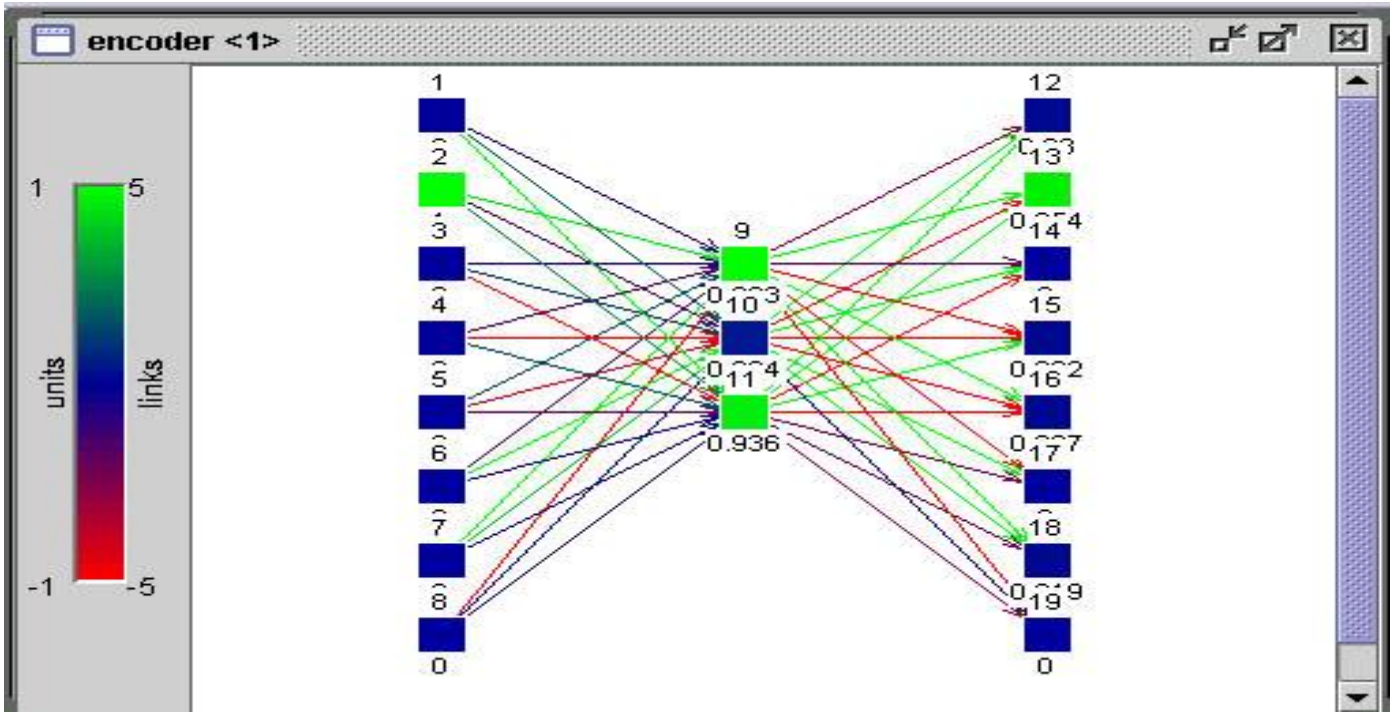
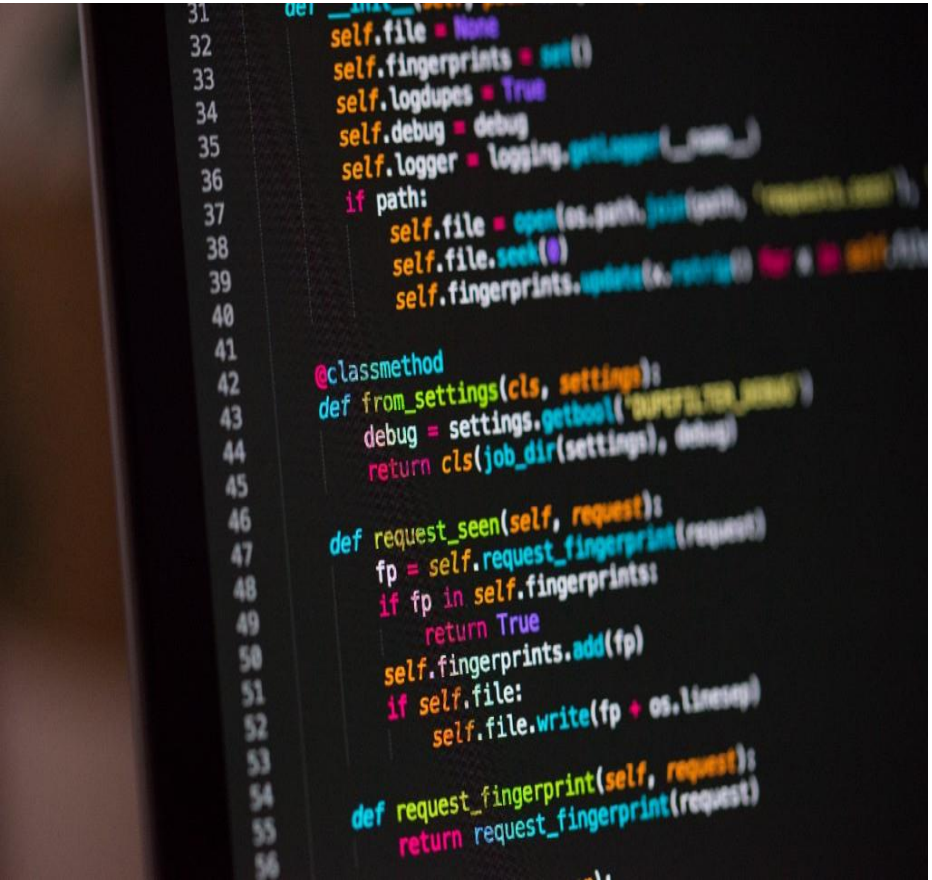
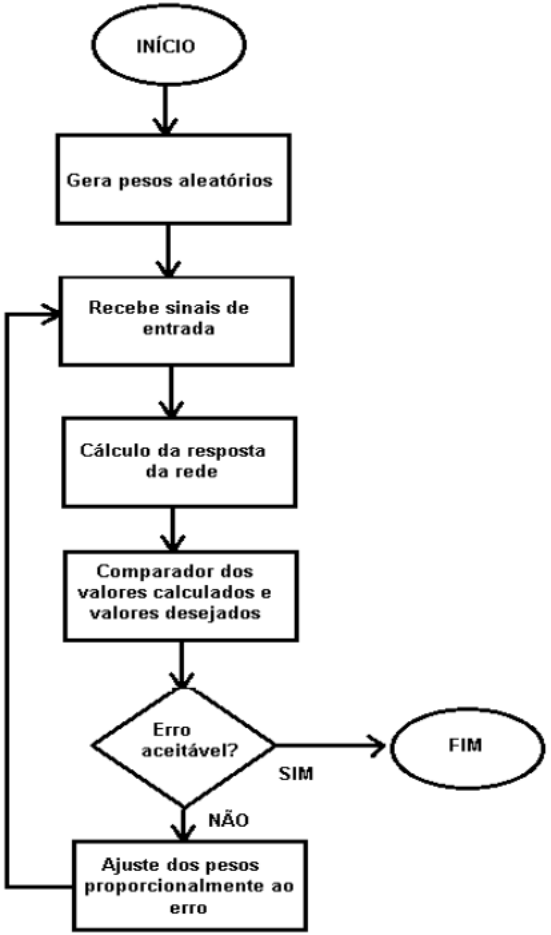
Relação dos pesos



Algoritmo





INÍCIO
Gera pesos aleatórios
Recebe sinais de entrada
Cálculo da resposta da rede
Comparador dos valores calculados e valores desejados
Erro aceitável?
SIM
FIM
NÃO
Ajuste dos pesos proporcionalmente ao erro

Importando Modelos de RNA

Classify ImageNet classes with ResNet50

```
from tensorflow.keras.applications.resnet50 import ResNet50
from tensorflow.keras.preprocessing import image
from tensorflow.keras.applications.resnet50 import preprocess_input, decode_predictions
import numpy as np

model = ResNet50(weights='imagenet')

img_path = 'elephant.jpg'
img = image.load_img(img_path, target_size=(224, 224))
x = image.img_to_array(img)
x = np.expand_dims(x, axis=0)
x = preprocess_input(x)
```
